MONTHLY WEATHER MAP

METEOROLOGICAL SERVICE, DOMINION OF CANADA

FEB 2 - 1937
WEATHER BUREAU

DECEMBER 1936

TEMPERATURE

The month averaged warmer than a normal December in southern British Columbia, southern Manitoba, in Ontario, south of James Bay, in the Atlantic Provinces and along the St. Lawrence valley as far east as the Saguenay River. It was colder than a normal December on the outer coastline of British Columbia and the Yukon Territory, the Mackenzie valley, the Hudson Bay region, in Alberta, the greater part of Saskatchewan, as well as in the region of the Gulf of St. Lawrence and western Newfoundland.

Temperatures averaged twelve degrees below normal at the mouth of the Mackenzie and six to ten degrees below normal over the greater part of the Yukon Territory. In the upper Mackenzie valley the departures below normal were from two to six degrees.

In British Columbia departures above normal were about two degrees over the southern portion of Vancouver Island, in the Fraser valley and along the coasts of the Strait of Georgia, as well as in the region of the Kootenays and the south Thompson River. Over the greater part of the Okanagan and Similkameen valleys the excess was about one degree. On the northern part of the outer coast there was a deficiency of two or three degrees.

In Alberta the greatest departures below normal temperature occurred in the foothill valleys and on the eastern slopes of the Rockies, reaching five to eight degrees below normal. In the Peace River and Lesser Slave settlements the month was two to five degrees colder than a normal December. Over the agricultural region of eastern Alberta the negative departures from normal were generally three to four degrees.

In southeastern Saskatchewan there was an area with temperatures about normal or slightly higher but elsewhere there were negative departures which reached four or five degrees in the extreme southwest and along the North Saskatchewan River towards the central portion of the grain region.

In Manitoba over the lake region and southward to the International Boundary temperatures averaged for the most part two degrees above normal and a little more in the Red River valley. North of the lake region the month was colder than a normal December by three degrees.

In Ontario there were negative departures from normal of one or two degrees in the region of the Lake of the Woods, in the region north of the Albany River and along the shores of James Bay. Elsewhere in Ontario the month was milder than a normal December, the positive departures reaching two or three degrees generally in the Lake Superior and Abitibi regions and three to five or six degrees over a considerable portion of the lower Great Lakes region. In the Ottawa valley and around Lake Nipissing, however, the excess over normal was only one or two degrees.

In Quebec along the St. Lawrence valley the excess over normal was two or three degrees and even more in some localities between the St. Lawrence River and the states of Vermont and Maine. Along the divide between the St. Lawrence and James Bay drainages, temperatures averaged about normal or slightly below and the same was true of the Gaspé Peninsula, the Island of Anticosti and the north shore of the Gulf of St. Lawrence.

Over New Brunswick, except the extreme north, temperatures averaged two to five degrees above normal and two to four degrees above normal in Nova Scotia except Cape Breton Island. In Prince Edward and Cape Breton Islands the excess was about one degree.

On the eastern coast of Newfoundland the temperatures were normal or slightly higher but in the interior and along the west coast were somewhat below normal.

Along Hudson Strait temperatures averaged one or two degrees below normal and on the western shores of Hudson Bay three to five degrees below normal.

PRECIPITATION

On southern Vancouver Island, the lower Fraser valley and the closely adjoining regions the total precipitation exceeded the normal amount by twenty-five to fifty per cent. In the western portion of the Thompson valley there was a deficiency of fifteen to fifty per cent. but in the Salmon Arm region there was an excess of fifty per cent. Generally in the Okanagan, Similkameen and Kettle valleys precipitation was deficient by thirty to seventy-five per cent. but there was a moderate excess in the Nicola valley. In the northern and eastern portions of the Kootenay valleys and on the western slopes of the Rockies precipitation exceeded the normal, the excesses varying very greatly with locality, ranging from twenty-five to one hundred and fifty per cent. On the outer coast of Vancouver Island the amount was normal or ten per cent. below normal. Along the northern portion of the coast of the mainland the amount was normal or slightly higher and the same was true of the upper Fraser valley.

In Alberta precipitation was two or three times the normal amount in the mountainous region of the extreme southwestern portion of the province. From Calgary northward to the Peace River, however, precipitation was generally deficient. On the eastern slopes of the Rockies the deficiency was generally twenty-five to fifty per cent. or more but precipitation was nearly normal in some parts of the Peace River country. On the plains of eastern Alberta precipitation was somewhat deficient east of Edmonton but somewhat in excess of normal from Medicine Hat northward to the Saskatchewan boundary.

In Saskatchewan and western Manitoba the precipitation was generally well in excess of the normal amount. Twice to three or four times the normal amount was recorded in the region of Battleford, Prince Albert and Saskatoon and generally much more than twice the normal amount in the region of the Qu'Appelle and Assiniboine Rivers. There was a slight deficiency, however, in the Red River valley of Manitoba.

In Ontario from the Lake of the Woods eastward along the north shore of Lake Superior the precipitation was generally twice the normal amount. On the slopes looking northward towards James Bay there was generally a slight deficiency and the same was true of the Georgian Bay region and the Lake Erie counties. North of Lake Ontario and on the slopes of the ridge facing Lake Ontario precipitation was generally in excess of normal. On the eastern slopes of the ridge between Lakes Ontario and Huron the excess was mostly thirty to sixty-five per cent. but on the eastern highlands north of Lake Ontario several stations reported more than twice the normal amount.

There was a moderate deficiency in the region of the upper St. Lawrence and the lower Ottawa Rivers and this deficiency extended along the middle St. Lawrence and in the region immediately south of the river as far as Quebec. There was also a region of moderate deficiency in the interior of Gaspé Peninsula. Along the Height of Land between the St. Lawrence and James Bay drainages and along the Saguenay River and Lake St. John there was an excess over normal which averaged about thirty-five per cent. although in some localities twice the normal amount was reported.

In New Brunswick the excess over normal precipitation averaged about fifty-five per cent. but there was a region near the headwaters of the Miramichi where there was a deficiency of about twenty-five per cent.

In Nova Scotia along the coast of the Bay of Fundy to the Minas Basin the excess over normal was thirty-five per cent. or less but along the Atlantic shores averaged about sixty-five per cent.

In Prince Edward Island both excess and deficiency were reported.

In the interior and northern portions of Newfoundland and the southern coast of the Labrador precipitation was in excess of the normal amount, by twenty to thirty-five per cent. in central Newfoundland and by one hundred and seventy-five per cent. in the region of the Straits of Belle Isle. In southeastern Newfoundland, however, precipitation was deficient by ten per cent. or more.

A. J. CONNOR

SPECIAL REPORTS

NOTE—Column H is Highest Temperature; Column L is Lowest Temperature; Column Tm is the mean temperature of the month; Column P is Precipitation in inches; Column I denotes total of bright sunshine in hours during the month; Column Sg. denotes depth of snow on ground in inches, where given.
